# **Tiny Quest**

«Многопользовательский» ролевой квест

## Команда

Бугаевский Владимир

Навражных Вадим

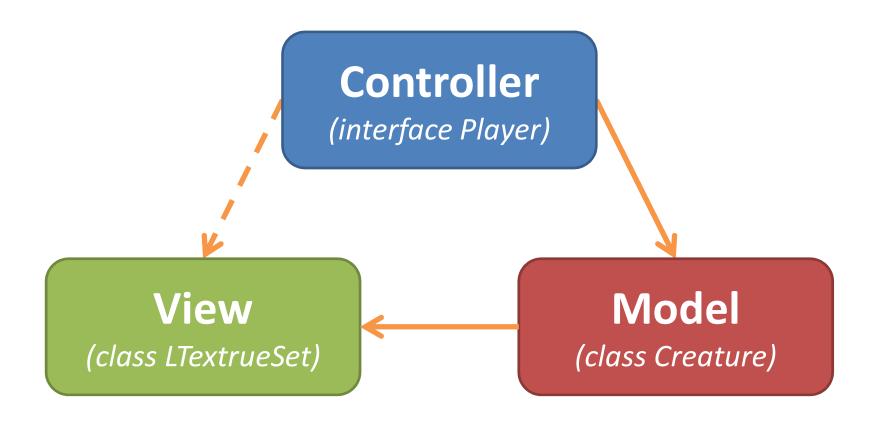

Демонстрация!

## Архитектура

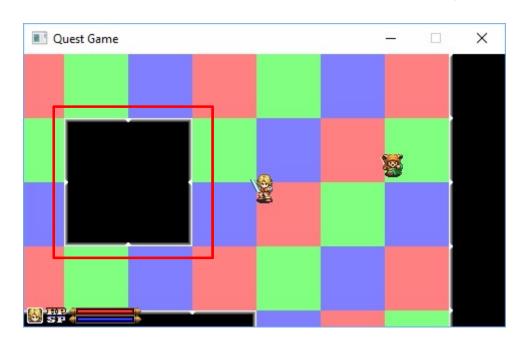

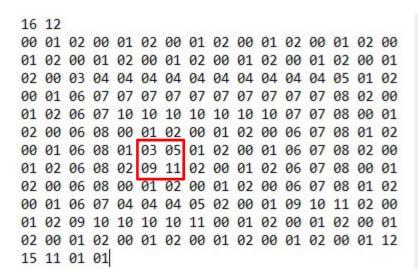

- Простой и удобный АРІ
- Кроссплатформенный
- Графика, звук, I/O
- Развивающийся (03-01-16)

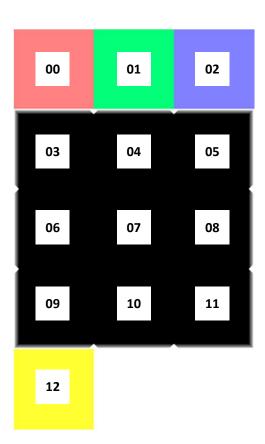

#### Model-View-Controller

## Замощение фона плитками

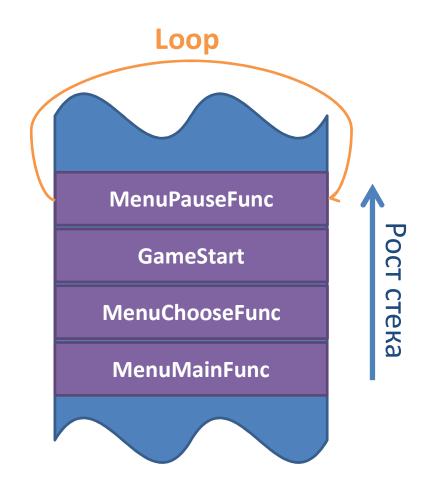

### Анимация

```
⊟enum StateEnum {
                                                                           STATE LOOKDOWN,
                                                                           STATE LOOKUP,
                                                                           STATE LOOKRIGHT,
                                                                           STATE LOOKLEFT,
                                                                           STATE WALKDOWN,
                                                                           STATE_WALKRIGHT,
                                                                           STATE WALKLEFT,
                                                                           STATE DAMAGEDOWN,
                                                                           STATE DAMAGEUP,
                                                                           STATE DAMAGERIGHT,
                                                                           STATE DAMAGELEFT,
                                                                       ⊕class State { ... };
const int m_frame_number[number_states] = {
                                                        const int m frame offset[number states] = {
                                                             0, 13, 26, 26,
                                                             (1) 14, 27, 27,
                                                            11, 24, 37, 37,
    2, 2, 2, 2,
                                                              5, 18, 31, 31,
    4, 4, 4, 4,
                                                              9, 22, 35, 35,
    1, 1, 1, 1,
                                                              9, 22, 35, 35,
    2, 2, 2, 2,
                                                             39
};
                                                        };
```

#### Переключение между окнами меню

```
□ class ViewManager {
 private:
     ViewManager();
 public:
     static ViewManager* Instance();
     void Loop();
     ~ViewManager();
 private:
     void exit();
     void MenuMainFunc();
     void MenuChooseFunc();
     void MenuPauseFunc();
     void GameStart();
     void EnteringLevel();
     void ExitingLevel();
     void GameOver();
 private:
     static ViewManager* m pinstance;
     std::stack<std::function<void()>> m stack;
 };
```

## Спасибо за внимание!
